- Training/Awareness

Where is the weak link in your Supply Chain?

Your organization is not immune to risk. Historically, continuity planning focused on fortifying your internal organization. Today that trend has changed! A new focus is the vital importance transportation services provide to supply chain continuity.

A recent study conducted by Michigan State University found:

"While critical, all risks are not internal. Increasingly, as more and more firms begin to rely on the supply chain and the capabilities of their suppliers, managers and researchers are coming to realize the true impact of supply-side disruptions. Business failures, disruptions or shutdowns among a firm's suppliers or in its inbound logistics channels can easily create a ripple effect of business interruptions throughout the supply chain."

Continuity Management

Transportation, Freight and Logistics

Timing is everything!

Today, the relationships between suppliers, manufacturers, and distributors have become more interconnected and fragile. On time delivery of products and materials in today's JIT (just in time) environment is vital. Any break in the supply chain can cause a negative ripple that impacts each component. Even the smallest disruption to a critical supplier or service provider could mean disaster for the remainder of the supply chain.

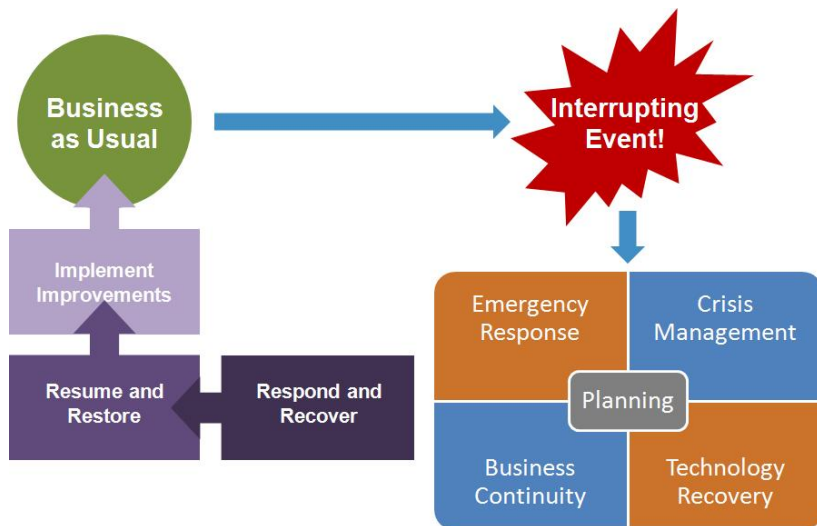

It is becoming more common for service level agreements that include business continuity to be included into supply chain contracts. Businesses depend on the delivery of products and services, regardless the challenges that others may be facing. Your customers deserve the guarantee of your ability to provide your services and products, no matter what.

FDI Consulting (FDI) understands the unique challenges that professional transportation organizations face and have successfully assisted transportation providers prepare to meet these challenges.

FDI is the logical choice to strengthen your organization's preparedness and provides the expertise to help you prepare for the unexpected.

Why choose FDI?

- FDI views business continuity as a long-term collaborative event between multiple departments rather than simply a point-in-time process.
- FDI Continuity Professionals have an average of 20 years of business continuity and disaster recovery experience. During this time, the team has developed many "best practices" which are now incorporated into their BC/DR methodologies.
- The team has created an online interviewing program which quickly collects necessary information from participants with less impact to their normal work schedule.
- FDI has a proven track record of delighted clients and success stories.
